# 1 Introduction

- from 2D cadastre to 3D cadastre : from surface to space

- Administration of land to management of property—precise management  
Ownership : from spatial extent to internal structure

1

# Introduction

## ➤ Condominium:

2

# Ownership structure

## ➤ Legal context in China

Land :

- All land (but rural land) is owned by the state
- Rural land is owned by the collective! (not state)
- Land can be used for private buildings – Ownership

## Condominium unit: (ownership including:)

- Exclusive part
- Common part
- common management

南房地权 市 字第 201200001 号				
房地产权利人	.....			
身份证明名称	居民身份证	身份证明号码	3702841978.....	
房地坐落	胶南市海滨二路599号1栋二单元111			
共有状况	共同共有			
登记时间	2012年4月26日			
房屋状况	建筑面积 (m <sup>2</sup> )	套内建筑面积 (m <sup>2</sup> )	74.07	
	85.29			
规划用途	居住	房屋性质		
土地状况	地号	8400221900001001	土地用途	住宅
	取得方式	出让	使用年限	2009年9月5日至 2079年9月4日止
	使用权面积 (m <sup>2</sup> )		其中 分摊面积 (m <sup>2</sup> )	
	共用使用权面积 (m <sup>2</sup> )	90688.09		

## 2 Ownership structure

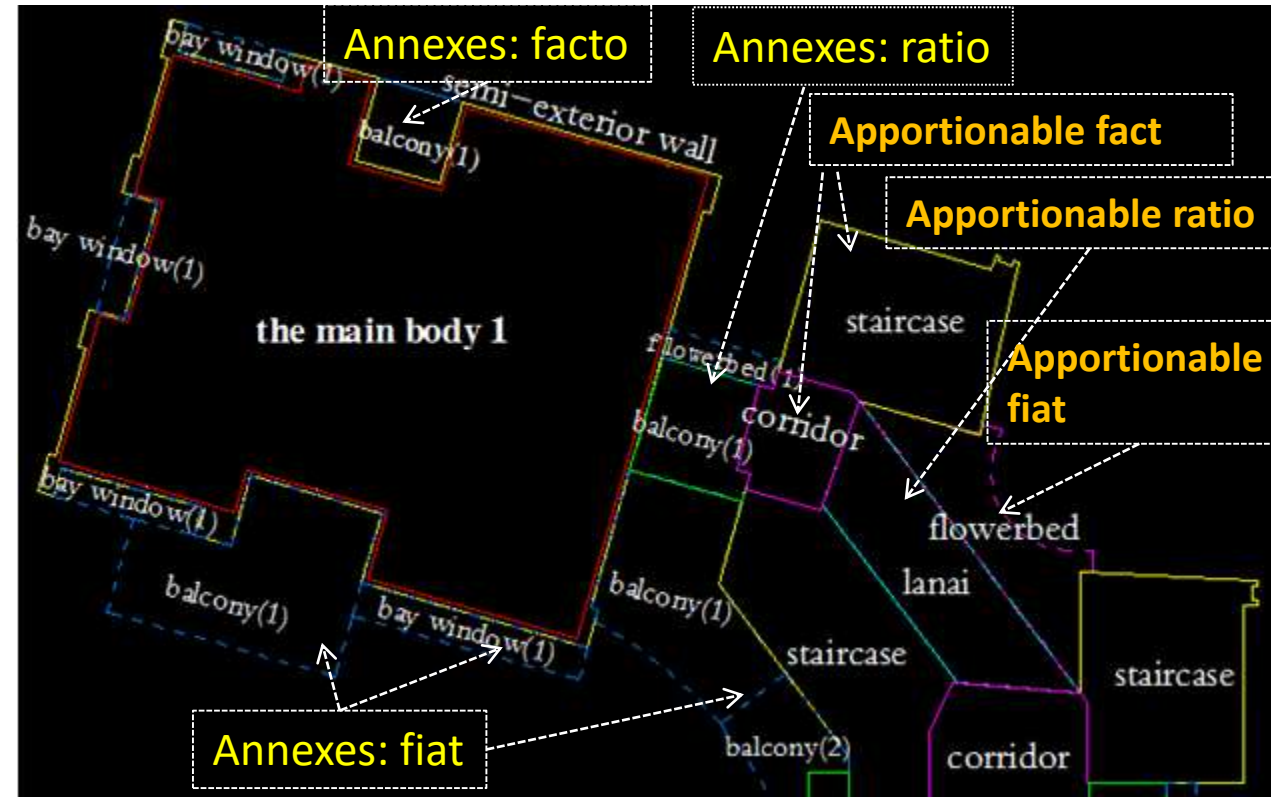

### ➤ Internal structure of ownership ( by physical components)

- **Exclusive objects**

- Major body
- Annexes
  - facto objects
  - ratio objects
  - fiat objects

- **Shared objects**

- Apportionable (area )
  - facto objects
  - ratio objects
  - fiat objects
- Non-Apportionable

## 2 Ownership structure

### ➤ Ancillary rights of ownership – Solar rights

**Solar rights: to ensure adequate sunlight.**

- Solar easements
- Neighbouring solar rights
- measurement of solar rights: **sunlight duration**

### *Code of Urban Residential Area Planning and Design*

- The sunlight duration received by homes for elderly people cannot be less than 2 hours
- Any new building will not reduce the duration of sunlight received by adjacent residences.

2

# Ownership structure

- How to calculate the sunlight duration
  - when (which day) : with the least sunlight duration.

Climate regions for buildings in China

The sunlight standard for residential buildings

Building climate region	I, II, III, and VII		IV		V and VI
	Metro	Small-medium	Metro	Small-medium	
Sunlight reference day	The Great Cold Day			Winter solstice	
<b>Sunlight duration (h)</b>	$\geq 2$	$\geq 3$			$\geq 1$
Period of effective sunlight (h)		8~16			9~15
Reference position	<b>Bottom edge of window</b>				

## 2 Ownership structure

- How to calculate the sunlight duration  
-- in which way: calculation of sunlight duration?

### Window-based calculation

Calculate the sunlight duration time of all the window, and take the maximum hours as the referenced sunlight duration of that housing unit.

$$h_{SD} = \text{Max}(\text{Num}(SD_A), \dots, \text{Num}(SD_N))$$

### Room-based calculation

For a habitable space (eg: bedroom and living room) with more than one windows, the union set of the sunshine period is considered as the sunlight duration of the habitable space. The maximum sunlight hours in all habitable spaces is considered as the sunlight hours of the housing unit.

$$h_{SD} = \text{Max}(\text{Num}(SD_A \cup SD_D), \text{Num}(SD_C))$$

# 3 CityGML-based data model

## ➤ Data model framework:

-- LADM (ISO 19152) : **LA\_RRR**, **LA\_SpatialUnit**

- **LA\_RRR:**

- **LA\_Right**

- **LA\_Restriction**

- **LA\_Responsibility**

- ...

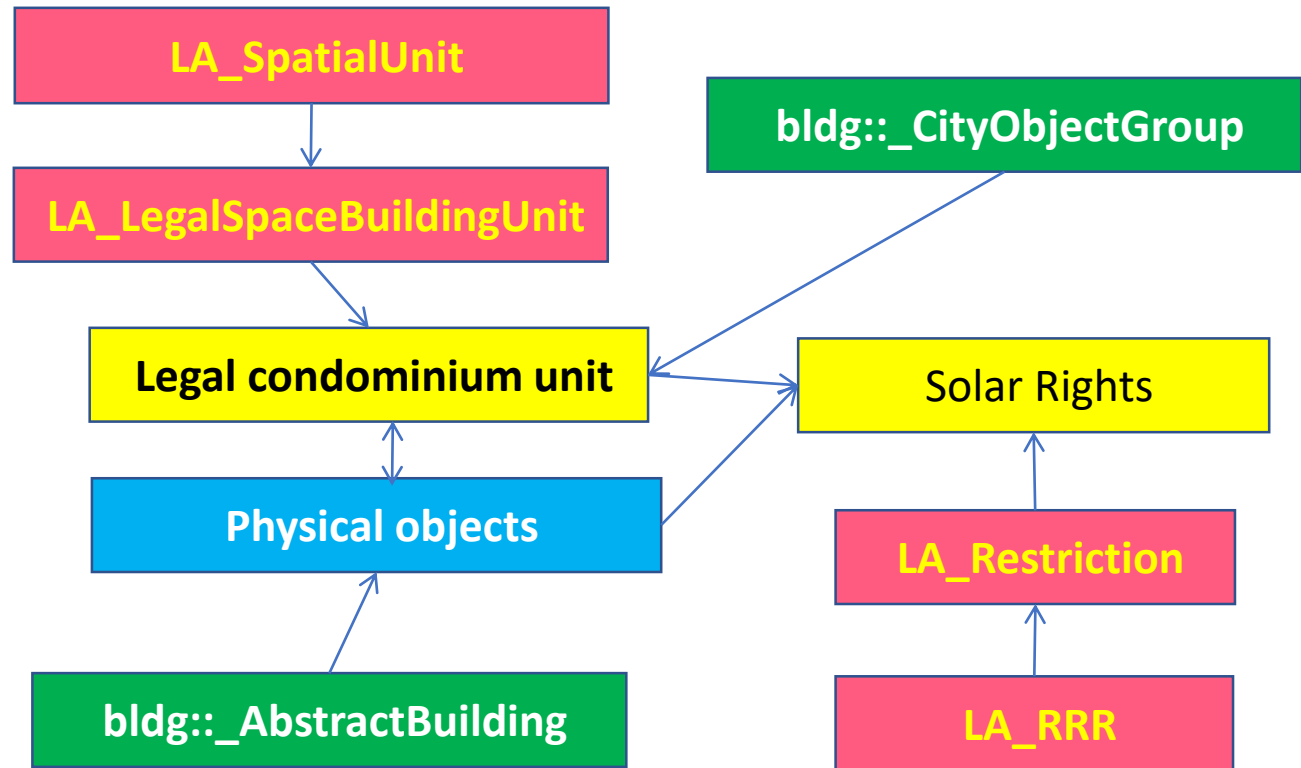

- **LA\_SpatialUnit:**

- **LA\_Right**

- **LA\_BoundaryFace**

- **LA\_LegalSpaceBuildingUnit**

- ...

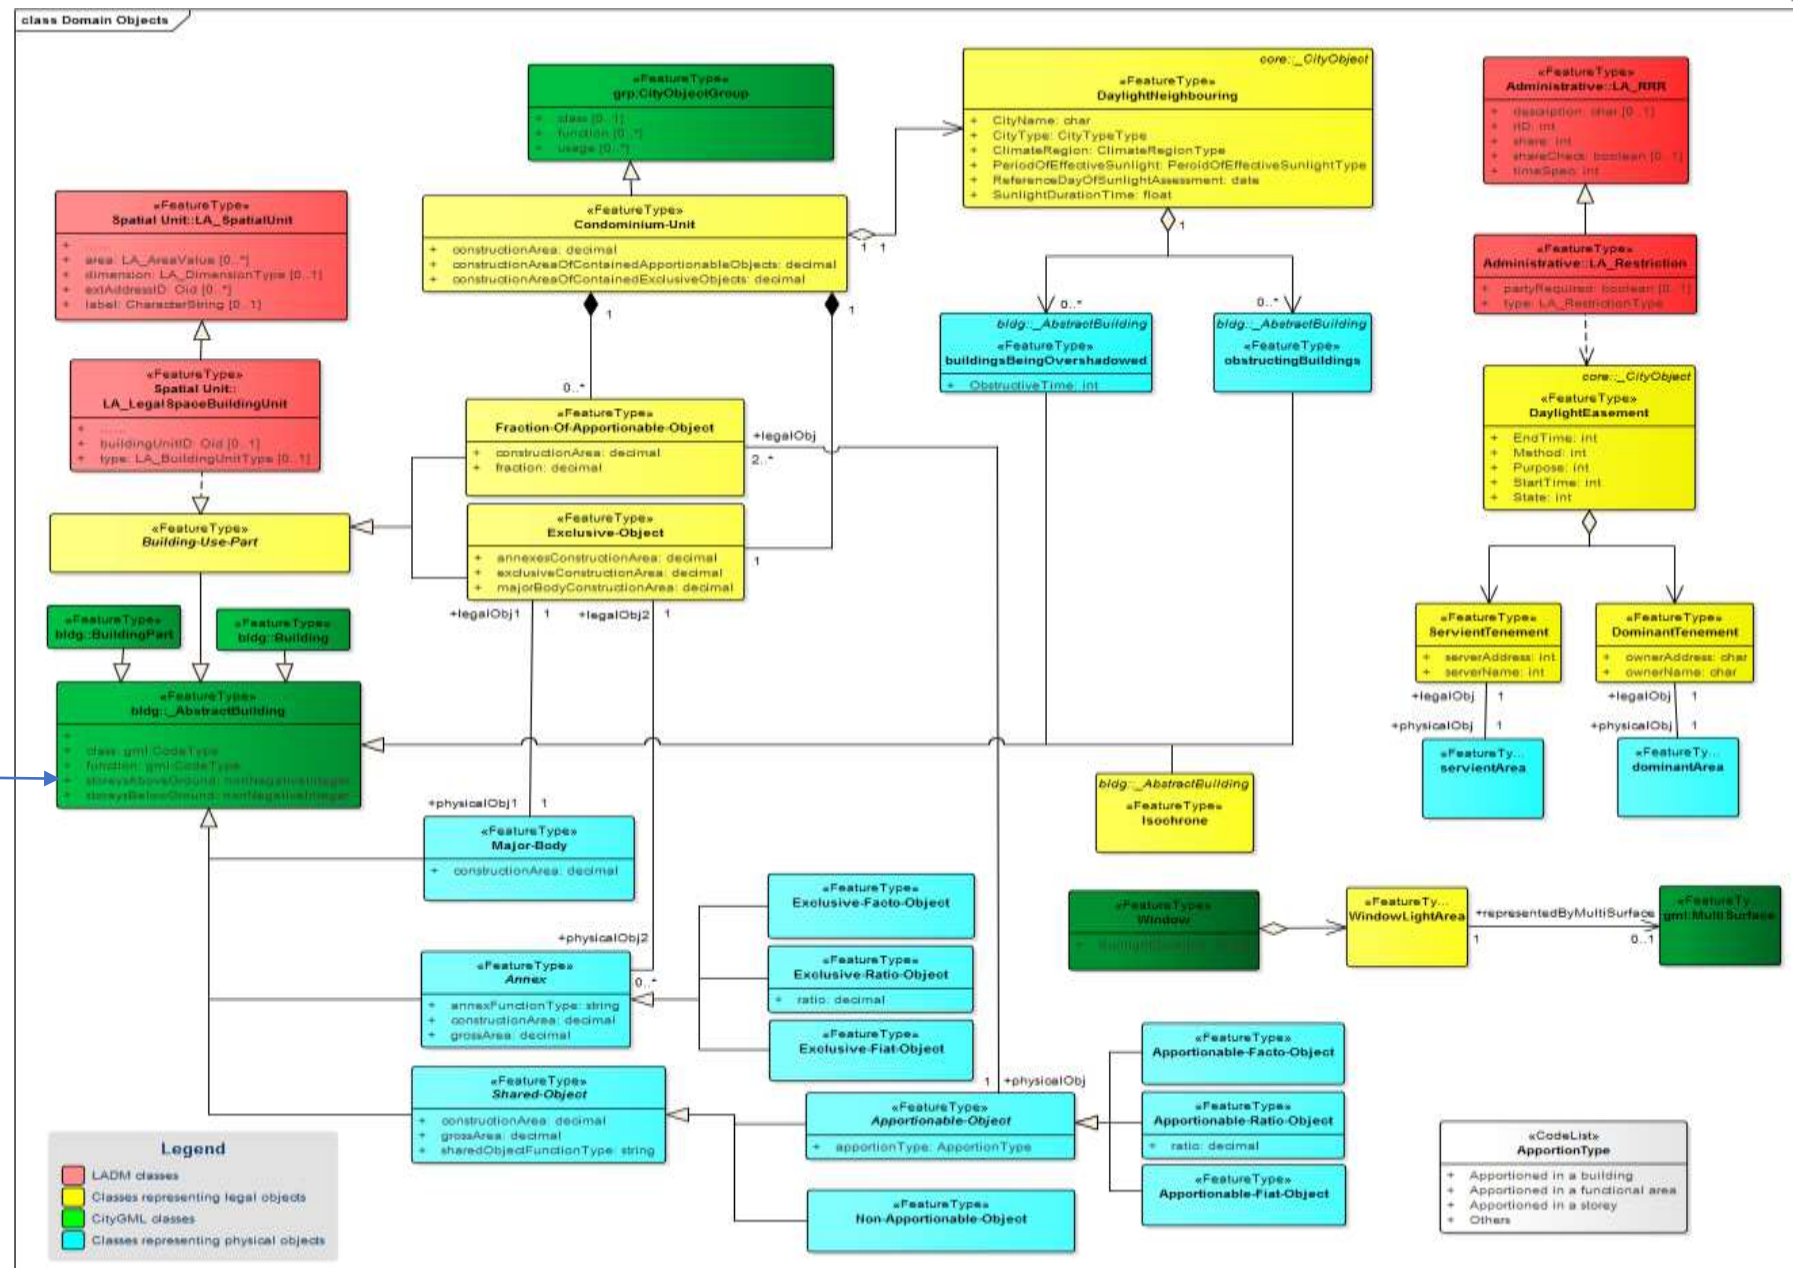

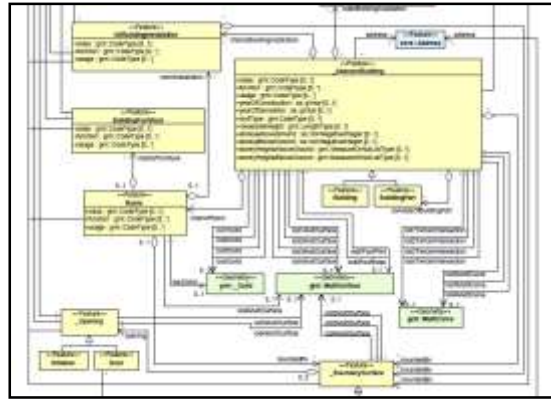

# 3 CityGML-based data model

## ➤ Data model

### CityGML:Geometry

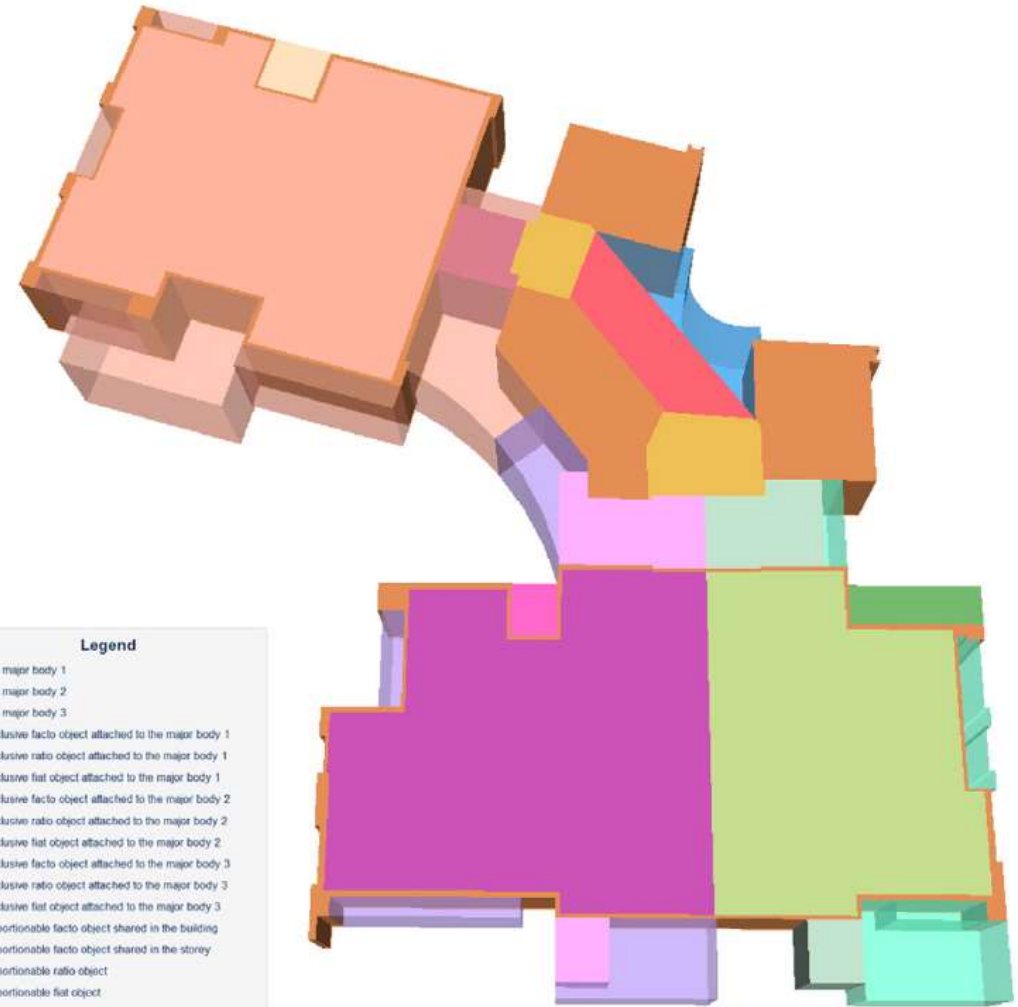

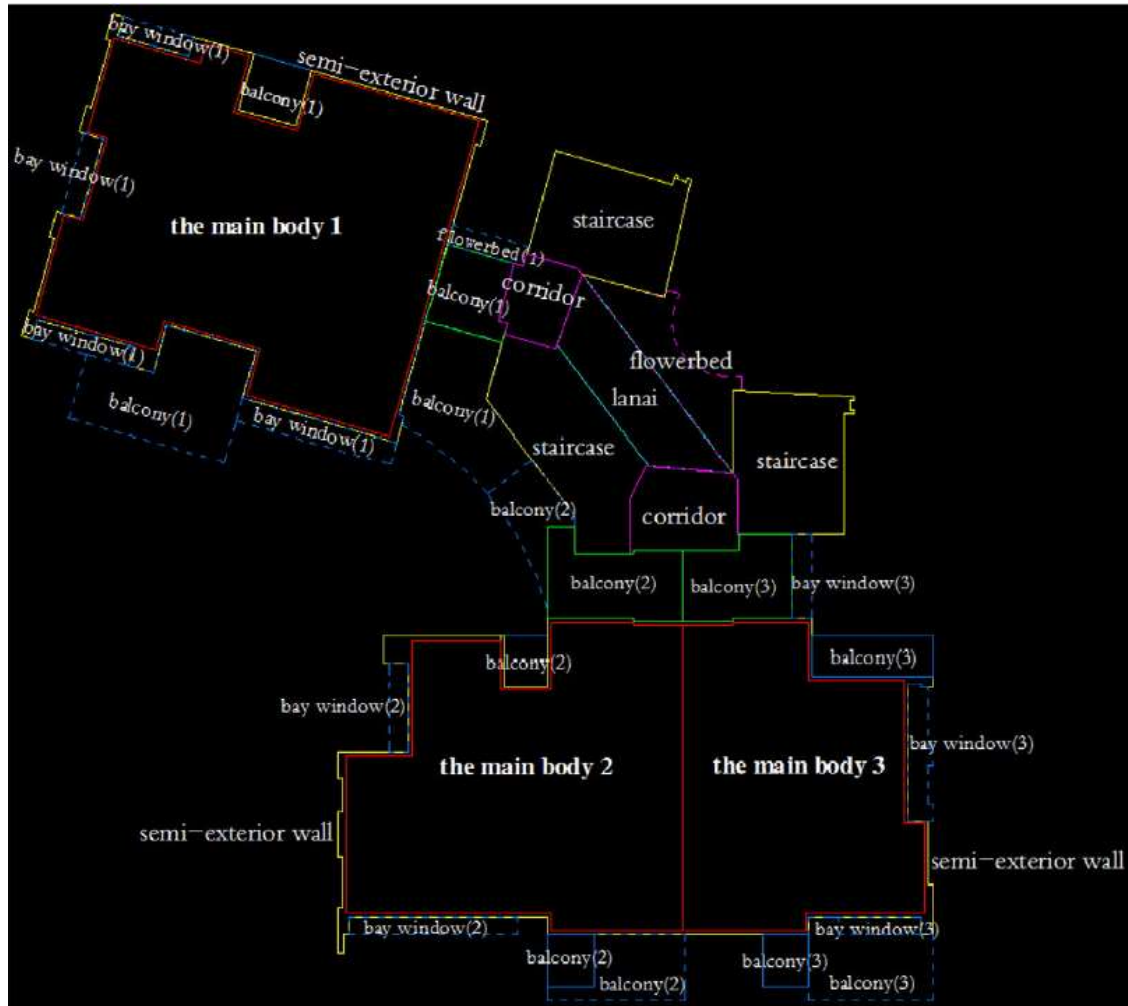

# 3 CityGML-based data model

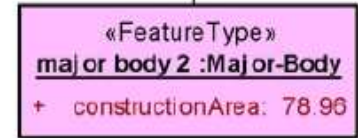

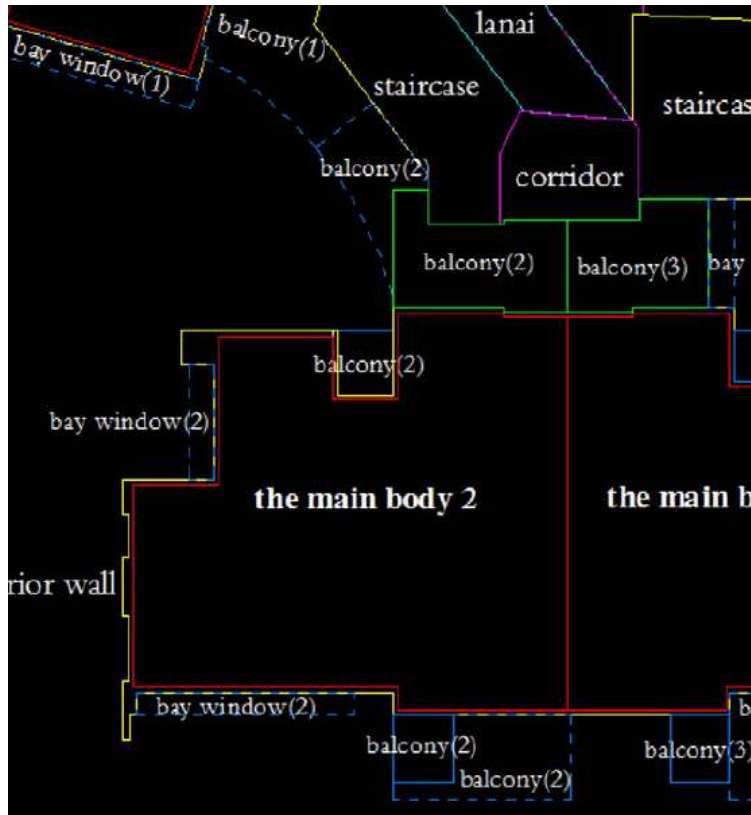

➤ Example: representation of internal structure of ownership

# 3 CityGML-based data model

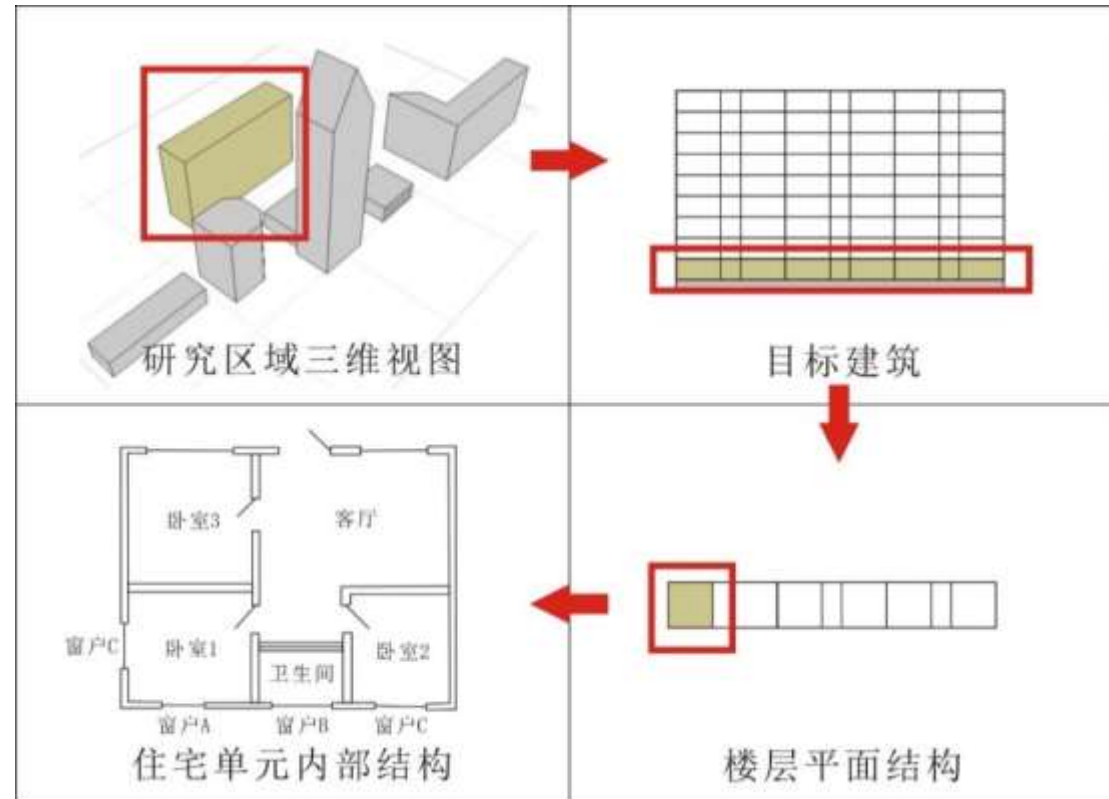

## --Unit 2

# 3 CityGML-based data model

➤ Example: representation of solar rights

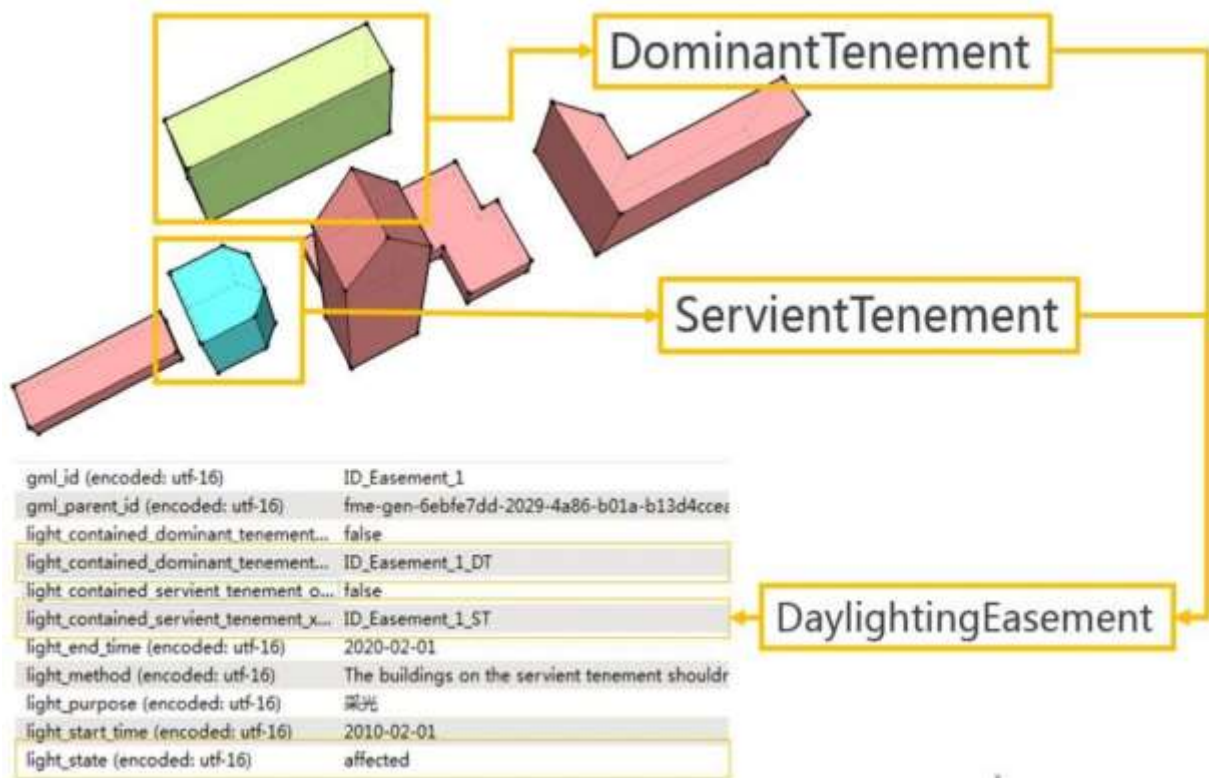

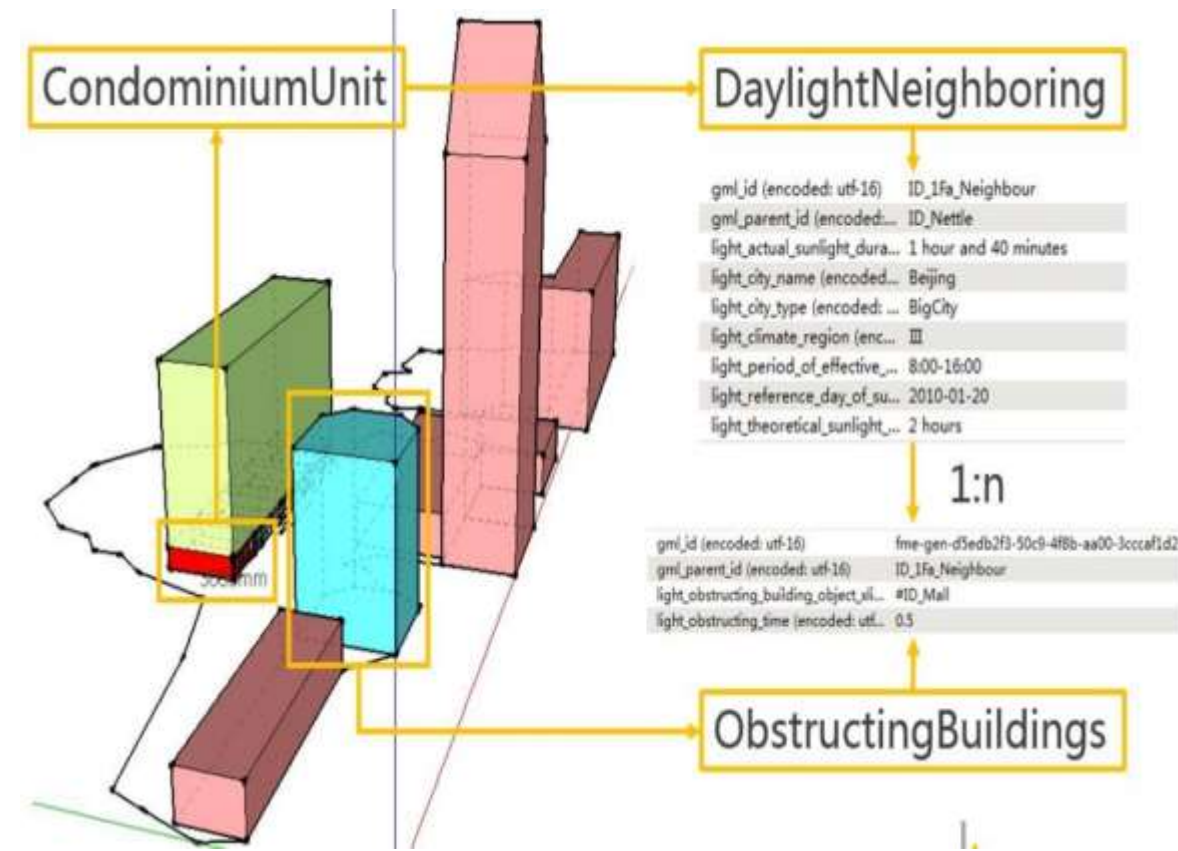

# 3 CityGML-based data model

## -- Representation of solar rights

Solar easements

Neighboring solar rights

# 3 CityGML-based data model

## -- Discussion

### Window-based calculation :

**Step 1:** Get the sunlight duration time of all the window objects in habitable space.

**Step 2:** Take the maximum sunlight hours of the window as the referenced sunlight duration time of that housing unit.

Housing unit	Room	Window	Windowsill	Sunlight duration
1FA	1	A	0.9m	1:30 (8:50-9:30 11:25-11:50 15:30-16:00)
		D	0.9m	1:00 (15:00-16:00)
	2	B	0.9m	1:25 (8:55-9:35 11:40-12:25)
	3	C	0.9m	1:45 (9:00-9:50 11:55-12:50)

**1.75 hours in total**

- ✓ 9:00-9:50
- ✓ 11:55-12:50

# 3 CityGML-based data model

## -- Discussion

### Room-based calculation :

**Step 1:** Get the union of sunlight period of window A and window D, and calculate the total number of sunlight duration.

**Step 2:** Get the maximum sunlight hours in all habitable area as the sunlight duration time of this housing unit.

Housing unit	Room	Window	Windowsill	Sunlight duration
1FA	1	A	0.9m	1:35 (8:50-9:30 11:25-11:50 15:30-16:00)
		D	0.9m	1:00 (15:00-16:00)
	2	B	0.9m	1:25 (8:55-9:35 11:40-12:25)
	3	C	0.9m	1:45 (9:00-9:50 11:55-12:50)

**2.5 hours in total**

- ✓ 8:50-9:30
- ✓ 11:25-11:50
- ✓ 15:00-16:00

## 4 Conclusions

- 1 Internal structure of ownership exists and can be semantically modeled and the current registration needs to be upgraded
- 2 Extending CityGML with the LADM is an available means for modeling the ownership structure of condominium units
- 3 Solar rights can be represented by spatial/temporal attributes in terms of sunlight duration, but calculation is multiple
- 4 3D/4D spatial modeling can provide a great help for clarifying legal conflicts of ownerships--technical support/not solution

EMBRACING OUR SMART WORLD WHERE THE CONTINENTS CONNECT:
